Networked Lockers. Need Of The Hour.

In today's evolving work landscape of dynamic working arrangements there is a pressing need in organisations for smart locker systems. These systems optimise resource utilisation as well as employee convenience.

Streamline Storage With SyncVault

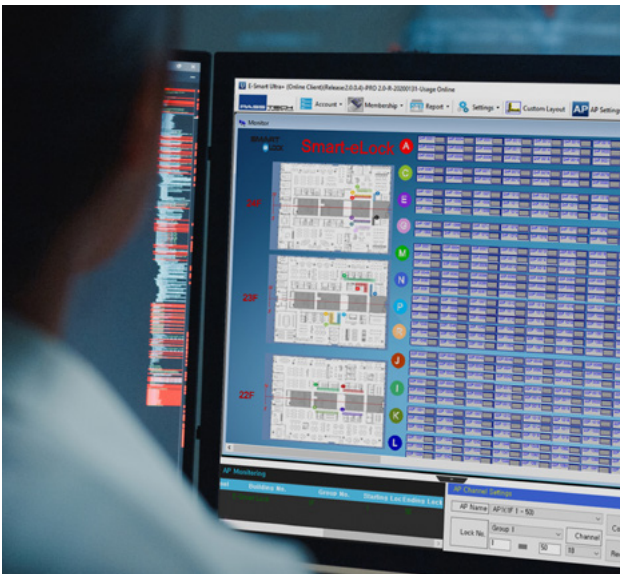

A smart storage solution built for scale, efficiency and flexibility. Designed and made with precision, with advanced security features and state-of-the-art technology.

Backed By Technology

SyncVault syncs every locker to the organisation's network, providing real-time visibility and automated monitoring of locker usage. Integration of technologies like RFID locks and network-based management systems enhances efficiency, security, and convenience.

Remote Monitoring & Management

For organisations managing extensive workforces distributed across multiple locations, traditional offline locker systems pose many challenges. SyncVault provides full control and updates through a comprehensive tech backend that can be managed remotely, providing a hassle-free experience for administrators.

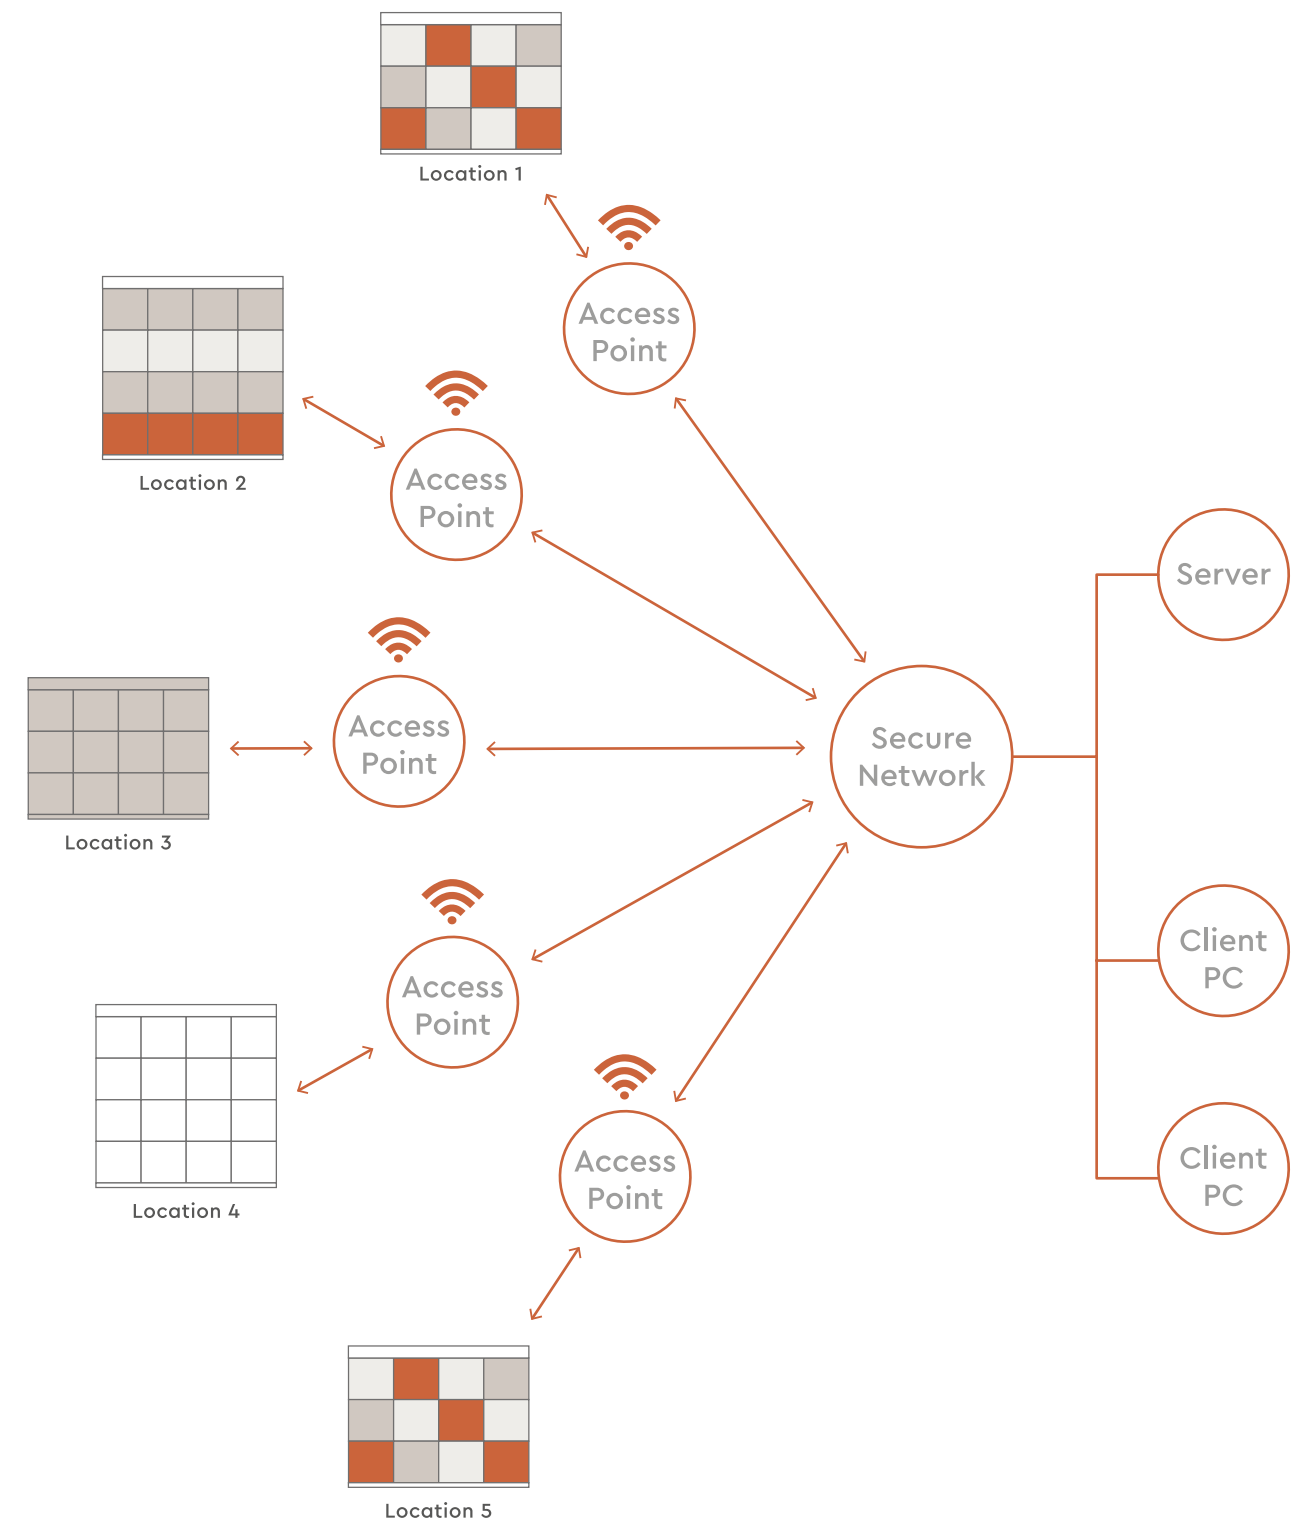

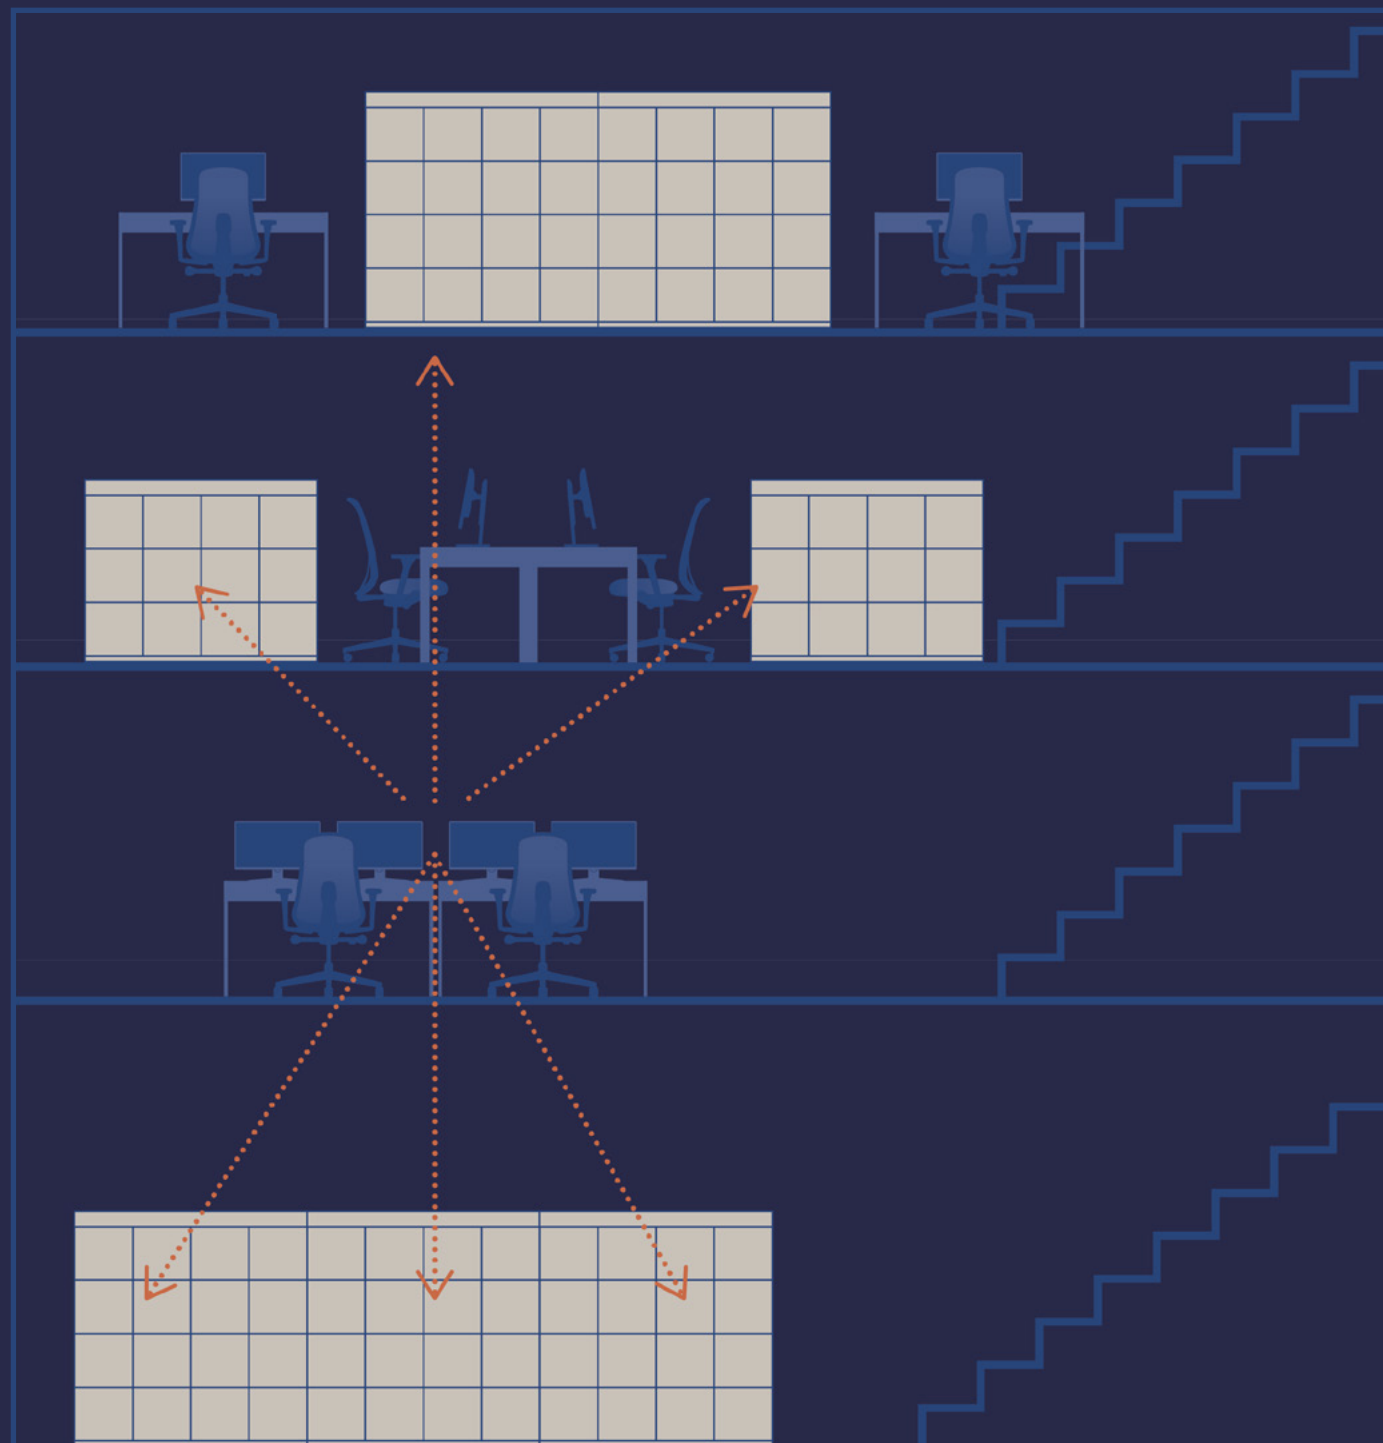

SyncVault, The Connected Storage Solution

Operational Efficiency & User Convenience

Centralised control for the locker system streamlines management and allocation of lockers, enabling quick and easy access for the users.

Enhanced Security & Data Privacy

User details are stored locally, ensuring complete confidentiality. The lockers are equipped with secure locks and alarms against tampering.

Scalability & Flexibility

As the organisation expands and grows, the various programming options allow SyncVault to be easily adapted to evolving needs.

Efficient Locker Management & Access

Enabling contactless locker management from a centralised location minimises the extensive manpower typically required, increasing operational efficiency while also providing employees with a smooth experience.

Bulk Data Update

This feature simplifies the process of updating data in bulk to the admin backend, making it easy to deploy smart locker management at your organisation.

Personalised Key

Compatible employee IDs can easily be converted into keys for lockers, granting access anywhere in the office.

Robust Security Measures

The server software for the locker database operates from a server within the organisation's network, rather than on a cloud server. This ensures the confidentiality of user locker details, making them inaccessible to those outside the network.

Lock Tampering
Heightened protection with alarms that activate upon any physical tampering of the locks.

Audit Trail
Detailed real-time log of the activity for each lock that can be remotely accessed, allowing for precise monitoring.

Scalable Storage for Diverse Settings

SyncVault facilitates scalability, whether it's expanding capacity or extending operations nationwide. Based on the requirement, the lockers can switch from one-to-one individual user mode to public mode for hot desking, coworking, or check-in check-out arrangements as well as a shift-based option for multi-shift areas.

Locking Options

Battery Powered Lock With Keypad

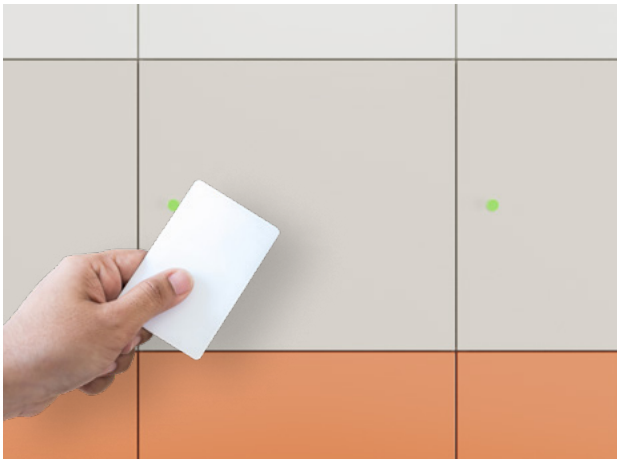

Available with metal and wooden shutter options.

Wire Powered Lock With Keypad

Available with metal and wooden shutter options.

Wire Powered Lock With Clean Fascia

No visible lock. Available with wooden shutters only.

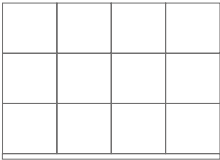

Wire-powered locks are cost-saving, reliable and more environment friendly as they reduce the electronic waste generated with the use of batteries.

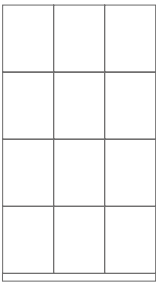

Lockers with hidden locks have an indicator and scan through the shutter, thus maintaining a clean outer look. This also allows for custom graphics to be added on the fascia.

Configurations

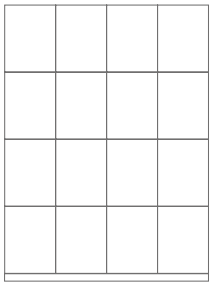

Choose between sugar white or coloured shutters, in 4 configurations. Further customise locks and power, as per your needs.
